

FOR IMMEDIATE RELEASE

OTIS TECHNOLOGY, INC. INTRODUCES ANOTHER ADVANCEMENT TO FIREARM SAFETY

Otis Technology introduces a Bore Reflector like no other. This dual purpose Bore Reflector gives you the ability to inspect any Bore, as well as flag an empty chamber to ensure it is safe.

All Otis Technology, Inc. Cleaning systems come standard with a Bore Reflector flag safety. The Bore Reflector can be used as a chamber light, enabling the firearm holder to visualize the inside of the chamber; this allows the user to see whether or not there is an obstruction inside the Bore. Also, more importantly, Bore Reflectors are used as a safety feature known as a Chamber Block or Flag Safety. When the Bore Reflector is placed inside the chamber of the firearm, it signifies that the chamber is clear, thus the only true way to guarantee the firearm is safe.

The design of the new Otis Bore Reflector now adapts easily to all flashlights, to illuminate the bore in dark or dimly lit conditions. While being composed of a special fiber optics material, the Bore Reflector can still be used with natural light alone to illuminate the Bore.

The new chamber design of the Otis Bore Reflector fits comfortably in most rifle chambers and fits better into pistols than the old Bore Reflector design. Another feature of the new Bore Reflector is an indestructible bolt rest. Whereas the old Bore Reflector had a rounded edge, the new flatter design allows the bolt to sit flush with the Bore Reflector.
