

FOR IMMEDIATE RELEASE

OTIS TECHNOLOGY, INC. MAKES AN ADVANCEMENT TO MODERN BORE BRUSHES
THE LEADER IN GUN CLEANING TECHNOLOGY BRINGS TWO TECHNOLOGIES TOGETHER

Otis Technology, Inc., the leader in the World's most advanced Gun Cleaning Systems takes a new approach on technology by combining the scrubbing features of a bore brush and the mopping features of a swab in one convenient tool. The combination of these two technologies together is known as IDT, Integrated Dual Technology.

The new IDT Brush includes all of the features of Otis Technology's bore brushes, in addition to a swab for in the field cleaning. The Otis brush has a brass core which won't scratch the lining of the bore, and the brass bristles have twice the fill of the conventional brushes. The 100% cotton swab on the IDT brush will not leave plastic streaks in the bore and will absorb lubricant and cleaners for a more complete and detail cleaning. In combination with an Otis Cleaning System, The IDT Brush is truly the fastest bore cleaner on the market today. By cleaning breech to muzzle, you have the ability to brush and mop at one pull. This one step process makes the IDT brush a must have for all firearm enthusiasts. It is offered in all calibers and even cleans limited breech and lever action firearms with ease. Like all other Otis gun cleaning components, it comes standard with an 8-32 thread and will attach onto the end of all Otis Memory Flex rods[®].
