

CamelBak's Advanced Chemical and Biological Resistant Reservoir First to be Approved by U.S. Military

CamelBak, the world leader in hands-free hydration solutions has had its new Chemical and Biological Resistant Reservoir (CBR X™), approved for use by the US Military -- the first of its kind to do so.

Designed to offer on-the-move hydration in a CBRN environment, the CRB X™ hydration system provides superior protective performance and meets the US Army's stringent requirements for a Multi-Purpose Personal Hydration System* that can withstand the rigors of daily use, making it easier and safer to stay hydrated in a CBRN threat environment.

The CBR X™ reservoir uses the tried and tested CamelBak HydroLink™ and HydroLock™ technology and can therefore be configured to fit to a wide range of Gas Masks/Respirators without inhibiting water flow from the reservoir or through protective masks.

The CBR X™ reservoir holds 3.0L of water (approx. 3 times the capacity of a standard water canteen). In conjunction with a protective mask it is designed to be fully operational in lethal gas environments and has been thoroughly tested at independent U.S. and international testing sites.

The CBR X™ advanced hydration system is ideal for military, law enforcement, homeland security, HAZMAT and emergency personnel faced with CBRN threats. ■
